

# FUTURE WORLD FUNK TREATMENT

Future World Funk is one of the country's leading DJ and production collectives, having played and hosted festivals across the world for many years.

The objective was to design a Web site that represented the colourful and cutting-edge nature of the collective and their music and provide a primary source for fans, artists, clubbers and industry insiders to gather more information on forthcoming events, CD releases and new music. It was necessary for the site to be developed in a way that allowed the collective to update all content, reflecting new releases, remixes and gigs.

The site was developed in Flash, to provide a rich but subtle user experience, with our own content management system, configured to allow the FWF team full access to site content.

FWF CD's can be purchased via the site using the product database and external sales links, whilst the custom audio player allows for new releases, remixes or radio shows to be streamed via the site.
